Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1 and 2 are rejected under 35 U.S.C. 102(b) as being anticipated by Kollann et al.

Kollann et al teaches an upstream-side sheet transport pathway 6; a plurality of downstream-side sheet transport pathways 4,5 that diverge from the upstream-side sheet transport pathway at a divergence point; and a pathway switching mechanism at the divergence point which selectively guides sheets from the upstream-side pathway to one of the plurality of downstream-side pathways. The pathway switching mechanism comprises a pair of upstream-stream side gate members composed of a pair of pivot shafts 19,20 and a pair of gates 17,18 and a gate member pivoting unit composed of a drive unit 22 connected to a drive transmission mechanism (the link connected to 22 and 19) and a ganging mechanism 33.

The structure being an image forming apparatus is considered intended use and the diverting structure of Kollann et al is capable of being employed wherever diverting of sheet material is desired.

3. Claims 3 through 9 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
